

Simplifying How Healthcare Operates

The Problem: Achieving Reliable Operational Excellence

Today's health systems are being asked to do more with less amid tremendous complexity. For many, the goal of providing high-quality care while containing costs has been elusive. Leaders have been trying to streamline operations across the enterprise but have struggled to execute consistently and sustain improvements. Frontline teams are overwhelmed given the thousands of disparate decisions they need to make in an intense, highly dynamic environment.

Health systems have tried dashboards, reports, and additional process improvement projects. But these traditional methods have failed to deliver sustainable, scalable results. Delivering care efficiently depends on real-time decision making by thousands of employees. In order for these organizations to take advantage of passing opportunities, teams must be empowered at every level to take action.

Progressive health systems are now seeking enterprise solutions that proactively streamline and automate workflows, allowing team members at all levels to work collaboratively to prevent issues and improve operational performance.

Introducing the Qventus “System of Action”

Operational Excellence Lies in the Last Mile

Qventus is the first enterprise “System of Action” that brings together data, technology, and people to make it possible for hospitals to run their operations efficiently, in real time and at scale.

Using artificial intelligence and machine learning, the platform continuously monitors operational data, anticipates potential issues, and delivers recommended course corrections to the right team members in the moment. Qventus surfaces decisions to the right people and empowers them to take action.

The last mile — pushing actionable information to the people who can affect change — is the key to operational excellence.

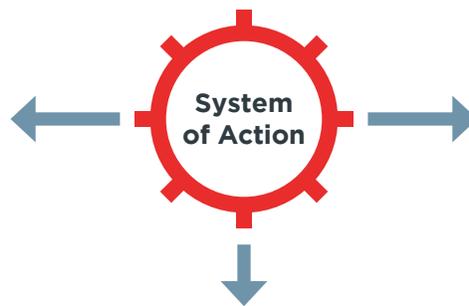

Measure Data Analytics and Insights

Uncover opportunities to streamline operations

- Granular reporting and analytics
- One-click root cause analysis
- Email reports and trend alerts

Manage Situational Awareness

Quickly surface issues in the moment

- Clear visualization of real-time operations
- Visibility into anticipated issues and bottlenecks
- Transparency at department, facility, and system levels

Activate Real-Time Collaboration

Mobilizes frontline teams with course corrections

- Interdisciplinary patient action lists
- Virtual huddles through Qventus mobile application
- Integration with email, text message, or existing communication platforms

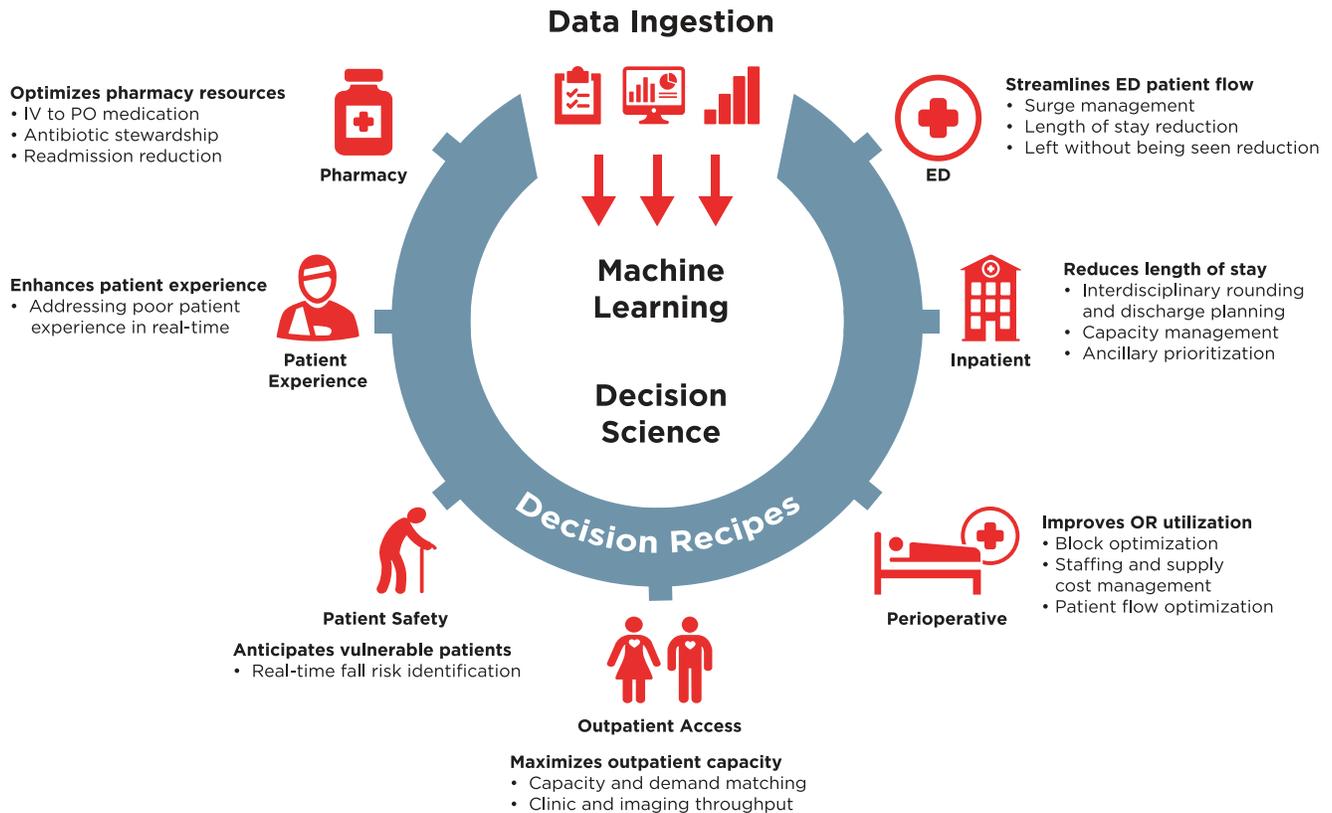

“Previously, I thought technology and collecting data was the answer for more efficiency. Now I know we need both a system of record — the EMR — and a system of action — Qventus. Qventus gets recommendations to the front lines for better decisions and reduces time spent on administrative tasks.”

Dr. Albert Chan, Vice President and Chief of Digital Patient Experience, Sutter Healthcare

Solving Operational Issues across the Health System

Today's health systems involve an interconnected web of processes across facilities and departments. Qventus offers solutions that scale across the entire health system, optimizing and coordinating resources dynamically.

Example Use Cases

Qventus Customer Success: Focused on Results

The Customer Success (CS) team supports institutions throughout the relationship with Qventus. The team is responsible for implementing the platform and maximizing value and ROI for customers. CS team members lead deployment efforts, which include defining operationalization strategy, data integration, and user training. CS works closely with leadership, managers, and frontline users to support change management, apply best practices, adjust programs, and implement new use cases. The team consists of experienced hospital operators, process improvement experts, and healthcare operations consultants from firms such as McKinsey, Deloitte, and Triage.

“We are honing in on making sure that we can deliver information in an actionable way to the front lines, not just another alert. It’s something that makes it easier for them to do their jobs...”

Dr. Peter Fleischut,
Chief Transformation Officer,
New York Presbyterian

Compelling Results

Over 60+ leading hospitals and health systems partner with Qventus to drive operational excellence. Once deployed, Qventus customers have observed meaningful impact in as few as 3 months.

Key Results Include:

10% Increase in first case on-time starts in the OR

15%+ Reduction in ED length of stay

.3+ Day reduction in inpatient length of stay

30%+ Reduction in ED left without being seen rate

39% Reduction in patient falls

33% Reduction in IV to PO spend

Why Leading Hospitals and Health Systems Choose Qventus:

- Activates frontline teams in real time
- Proactively streamlines and automates workflows
- Adapts in real time with predictive analytics and machine learning
- Scales across the health system as an enterprise platform
- Delivers value quickly to leadership and front line teams

Our customers span 60+ leading health systems, academic medical centers, and community hospitals, including:

About Qventus

Qventus' mission is to simplify how healthcare operates so it just works – for everyone.

The company offers an AI-based software platform that helps hospital teams make better operational decisions in real-time, with positive impacts on financial performance and patient experience. Qventus addresses operational challenges across the hospital including emergency departments, perioperative areas, patient safety, inpatient, outpatient, and pharmacy.

Located in Silicon Valley, Qventus is honored to be working with leading public, academic, and community hospitals across the United States and Canada. Qventus was named among Fast Company's Most Innovative Companies for 2018. The company has also been recognized as a leader and innovator in operational excellence, with the 2016 Fierce Innovations Award in Healthcare and Healthcare Informatics 2017 Innovator Award.
